

Dataset Access

1. Go to <https://homes.cs.washington.edu/~thickstn/start.html>
2. Download the raw [dataset](#) (wav, csv). Make sure you have enough space as the compressed file is 10gb on its own and ~30 gb when expanded

Tagging

1. The same instructions apply for both the train_data and the test_data folders which both contain the wav files we will be using
2. Create a blank excel sheet with three columns
 - 2.1. The file name (the number e.g. 1701)
 - 2.2. Classified Emotion -- (e.g. Class 1, 2, 3, or 4)
 - 2.3. Secondary Emotion --(Class 1-4)
3. For tagging, listen to each piece as long as you need to make a judgment on what emotion it evokes in you. Choose from the following four options:
 - 3.1. Class 1: Happy, Exciting
 - 3.2. Class 2: Anxious, Angry
 - 3.3. Class 3: Sad, Depressed
 - 3.4. Class 4: Relaxed, Calm
4. It's possible that a piece exhibits more than one of these emotion classes. If so, note the secondary emotion evoked.
